HK OPEN HOUSE

Showcasing the brand new Tube Laser Series

On June 7th, HK Laser & Systems held its annual Open House. The Open House took place at the HK Showroom located in Bartlett, IL, allowing both customers and dealers to take a look at HK's newest products in person. For this year's Open House, HK wanted to showcase its latest product, the new Tube Laser Cutting system, as well as the RS 10kW and the FS 12kW.

With three outstanding machines on display, many customers and dealers were able to witness first-hand just how powerful and quick HK's machines can be. However, the star of the Open House was the new Tube Laser Cutting system. Most of the visitors quickly made way to take a look at the brand new Tube Laser Cutting system, and for good reason. This new product comes in a variety of models in terms of size of the chucks, infeed dimension, automation and laser power. These models will serve the entire tube cutting industry, even including the heavy-duty structural industry such as H or C beams, angles and rectangular pipes.

HK wanted to use this year's Open House as an introduction to the new Tube Laser Cutting system, as there is good reason to believe that this new cutting system can be a game-changing solution to the steel structural industry, as it has capabilities that others just can't match.

If you weren't able to make it to the Open House, visit HK's website at www.hk-us.com for more information on the new Tube Laser Cutting system, as well as current machines and products.
